Remarkable Success of an Idaho Miner Who Began with Nothing-Prespects in Texas-Biches in the Phenix Mine,

Artzonn-Copper in Connectiont, IDANO CITY, June 27.-The Silver Mountain Mining Company, a company of wealthy Engishmen who began operations in the Silver Mountain district about two years ago, are again preparing to resume operations. This company first secured thirteen locations, all mammoth yeins, and all carrying a little silver on the surface. Their expert, Prof. Boyd, ex-amined them, made a favorable report, and the company secured a controlling interest The report was telegraphed from Bolse City, and inside of two days the mill was ordered by telegraph and a contract let for a wagon road. work on which was begun in a few days after the contract was let, and finished thirty-five miles in a few weeks, and, as soon as completed, was literally lined with big freight teams hauling in supplies. All was bustle in the new camp, three or four hundred men goon finding employment. The outlay all told is said to have been somewhere near \$1,000,000. Such an enormous expenditure was the result mainly of mismanagement, mouey-making schemes engineered by those having charge of the company's financial affairs, and the high price of supplies. The company finally com-pleted a 300-foot tunnel, tapped one of their reins-the Julia-about 200 feet deep, and the mill made a run of a couple days and then for some reason all work stopped.

Innumerable creditors attached the property.

and the mine and mill were sold at Sheriff's sale. The company, however, redeemed the property, and a few weeks ago two representafives went out to see what was best to be done. The expert, Capt, Hambly, is well pleased, and is satisfied that at great depth the mines will prove very valuable, and the company, relying in his judgment, has determined to prosecute development on an extensive scale. A tunnel is now to be run from the foot of the mountain near the river. The latest improved drills will be u-ed, and it is estimated that the tunnel will be completed in two years. Work will begin as soon as teams can go over the road.

The greatest mine in Idaho, and probably the greatest known for the development done. is the De Lamur, in Owyhee county. The owner. Capt. De Lamar, an Englishman by birth, arrived in Silver City, that county, a few years ago. He fo med a good opinion of the eroppings of this mine. He finally got a little backing, the Waid Brothers furnishing the capital and De Lamar furnishing the indement, experience, and the then undeveloped mine. A twenty-stamp mill was put up, and after runn n.c. a 1.800-foot tunnel a body of ore was opened 370 feet wide, all one ledge, ore was opened 3.0 feet wide, all one ledge, but divided by a narrow porphyry belt. De Lamar soon bought the one-half interest of his partners for \$5,0,000. They did not have the faith of ibe I amar in the permanency of the more but it still holds out and continues

the faith of Pe Lamar in the permanency of the mine but it still holds out and continues to improve.

Be Lamar is said to be now worth \$2,000,000. The rionest of the ore, being telluride, is shipped. This ore is found in pockets in the mine. One shipment, made recently, netted him \$220,000. The ore Isall soft, and but little blasting is required. Timbers have been hauled thirty miles, and the supply is now about exhausted.

The town that has sprung up at this mine is nine miles northwest of the once famous Silver City, whose surrounding mines have yielded millions.

Silver Citt. N. M., July 1.—An effort is now being made by W. G. Waring of this city to have a complete recological survey of Grant county made. A number of mining men have already expressed a willingness to assist in this matter, which will undoubtedly be of great benefit to the mining interests of the county. The estimated cost of the work is \$16,000, including the publication of maps and reports. The survey, if made, will be under the direction of Clement L. Webster, State geologist of lows, who has been in this county about eleven months engaged in Government work, and whose researches in geology, paleontology, and archaeology have won for him an envisible reputation. In his work here he has been over a considerable portion of the county, which has an area of nearly 10,000 aquare miles, and contains about forty mining districts in various stages of development. He says that, from a geological standpoint, it is the most wonderful region he has ever seen. He has spent several days near this place, and says the same sliver-bearing rock which is found at or near, the surface in Chloride Flat, about a mile and a half from the city limits, which has produced more than a million dollars' worth of ore, will be found at a depth of about 700 feet in Legal Tender Hill, which comes to the city limits, and that the same formation probably extends under a considerable portion of the city.

formation propagity extends under a consideration of the city.

The entire mass of Legal Tender Hill has been estimated to contain \$4 per ton in silver, but if ms teh ere can be found there at a depth of 700 (see as is found in Chloride Fiat there is a big been alread for Silver City.

Mr. W. H. Newcom b, who owns about thirty
claims on Legal Tender Hill, conceived the clams on Legal Tender Hill, conceived the idea that rich milleral existed there at a con-Idea that rich mit eral existed there at a con-saeranie ingeth, and put down a prospect hole several hundred test with a diamond drill. He has never made the result of this work known, and has merely kept up the assessment work on his claims since. Frot. Webster has located a number of foul' lines near this place, which exidate the diversity of surface formations and the great difference in depth of a certain mineral-leading structure in two localities but a short distance apart. The whole surface of the country is, to a greater of less degree, short distance apar. The whole surface of the country is, to a greater or less degree, broken up in this manner, and the advantage of a complete geological survey is obvious. Mr. Waring poin's out that, had it not been for the Hayden survey of 1875. Leadville might not yet have been discovered, and contends ret have been discovered, and contends a re-logical servey would be of incalcu-berellt to the county. that a ge-logical survey would be of incalculable beself; to thes county. There is no mining region in the world of similar extent where as many metals are found as are now known to exist in terant county. Gold, sliver, concer, from lead, and wine are now being profitably mined in different portions of the county, and many other metals have been found, though not in sufficient quantities to bay for working.

found, though not in sufficient quantities to pay for working.

The said of the Last Chance mine at Silver Creek has been closed. It was bonded several months and by John M. Wright of this city for \$5 mm. The money was paid here on Saturday by R. F. McCamas of Nebraska City, who rebrosents the syndicate which bought the property. Develorment work enough was done on the Last Chance before the bargain was closed to show that there is one enough above the level of the lower tunnel to keep a twenty-stamp mill running steadily for a number of stamp mill running steadily for a number of years. A twenty-stamp mill will be put up by the new company as soon as it can be got on the ground. This is one of several important mining deals which have been pending in that district for several months.

There is increased activity in the zinc mines at Hanover, and the results obtained so far by the company which recently nurchased a num-

There is increased activity in the zinc mines at lianover, and the results obtained so far by the company which recently purchased a number of zinc mines there have been entirely satisfacory. Smith & Winters have just sold the lyelina mine at Hanover to a Detroit company, a large body of fine zinc carbonate ore has been opened up in Bennett's Willie mine there. It is said to be a very desirable ore.

A very rich strike of sliver ore is reported from the St. Limo mine at Black Fawk. A number of good strikes have been made in that camp within the past few months, and a large amount of high-grade ore is now in sight. The outlook for the summer at Pinos Altos is getting better. There have been some light showers, and the indications are that there will be plenty of water for the mill there in a low days. The extreme dryness of the season has seriously interfered with work in that camp, but an early rainy season seems to be assured. As soon as the heavy summer rains come all the mills can start up and placer mining there can be resumed.

The 500-foot level of the Mountain Key mine looks well, and richer ore is being taken from it than has been found in any of the upper levels. The theory that rich ore could be found only near the surface in the Pinos Altos mines has been completely exploded.

Shipments of ore from the Pinos Altos mines has been completely exploded.

Shipments of ore from the Pinos Altos mines had been completely exploded.

Mines in Maxico and Texas.

MINES IN MEXICO AND TEXAS.

BAN ANTONIO, Texas, July 1.—The famous Ban Carlos mines are about thirty miles west of Linares, Mexico, in the San Carlos Moonfalas. The principal mines there are the La leyonia, Ymogene, La Negra, La liftiana San Manacio, and La Leona, which are worked by the Linares Land and Mining Company, of which A. W. Gifford of this city is President, and the San Joe & Mining Commany, of which B. G. Smith is the superintendent.

An admidiance of iron, lead, copper, silver, and good ore is found there, but the properties are at present being worked solely for gold.

The Linares Land and Mining Company are described in the land and they have about fits non-employed. Some samples taken recently from their prespects have assayed as light as \$250, gold, to the ton, but the average is considerably less.

About twenty-five miles north of San Carlos free these MINES IN MEXICO AND TEXAS.

haired men. A few years ago it began to be demonstrated that Teyas, as an agricultural State, had a bright future, and to-day it is be-ginning to be known that she has coal and fron fields that rival those of Fennsylvania, and sliver prospects which, when developed, will compare favorably with those of Nevada and Colorado.

and sliver prospects which, when developed, will compare favorably with those of Nevada and Colorado.

In Liano county there are perfect mountains of fron ore, the quality of which is pronounced by experts as equal, if not superior, to that of the Great Republic mine at Margeette, Mich., which sells for \$150 per ton higher than any other fron ore in the Eastern cities. The quantity of this ore is inexhaustible, and the district is the greatest for Bessemer iron in the country.

The silver prospects at Liano are also excellent. The Haby fread mine, owned by Capt. Miller of Liano town, is turning out to be a boranca. Its ore assays as high as \$360 of argentiferous galena to the ton.

The Silver Creek Caffon mine, in the Liano district, is being run. The owners have refused an offer of \$25,000 for an undeveloped prospect adjoining the one being worked.

PROGRESS IN ABIZONA.

an offer of \$25,000 for an undeveloped prospect adjoining the one being worked.

PROCRESS IN ARIZONA.

Tucson, Ariz., June 27.—Two good properties, one in Gila county, the other in Maricona, have been sold this week. Some months ago Claude M. Johnson went east with a bond on some good mines in Gila county, and this week came back with J. S. Murphy to examine them, and while here closed the sale of the Cartigan and Ivenpaugh to men from Lexington. Ry. These mines were the property of Isaac Williams, Whilam Bell, and H. D. Williams. They are in the Ajo district. forty miles south of Gila Bend and within twenty miles of the once famous Gunsight mine. There are four other mines in the same group, but the Cartigan is the principal one, upon which there has been about 300 feet of development work done. The deepest shaft is ninety seet, at the bottom of which theyein of ore is about four feet wide, which gives an average of \$30 in silver and copper. Eight men are now employed on the mine, under H. D. Williams, foreman. It is the intention of the company to increase the force of men as soon as the heater term is over. The ore is a smelting proposition, and there is plenty of water, with a good level road to Gila liend.

The mines have been transferred to J. D. Yarrington, R. C. Morgan, J. S. Murphy, and Claude M. Johnson who will not list the mines, but will work them as a private itrm, attending to the business themselves for the sole benefit of the owners.

to the business themselves for the solo benefit of the owners.

The districts of Glia county and Casa Grande seem to be favorities in the market now, and some good properties are being developed. The Central Silver made a good shipment this work of buillion to St. Louis, where the mine is owned. The mill is working well, and all soems to be in a prosperous condition.

A train load of twelve cars of ore was shipped from Nogales this week for Penver. The ore was purchased throughout the Sierra Mountains in Senora, hauled from there to Mazatian, and shipped to Guaymas by steamer, and thence by rail to Denver. This is perhaps the largest slugle shipment of ore that has ever been sent out of Mexico, and consisted of over 200 tens, and the freight charges from Mazatian to Denver amounted to \$50 per ton. The ore assayed all the way from \$300 to \$600 in silver.

line to Denver amounted to \$50 per ton. The ore assayed all the way from \$300 to \$500 in silver.

The Phornix mine in the Cave Creek district, twenty-five miles north of Phornix, is one of the obsomenal mines of the West. There is probably no larger body of cre to be found anywhere in the Southwest, and the possibilities of this mine are practically limitless. It was but a few months ago that the stock of this mine was selling in the New York market at 41 cents per share, and now it fluctuates around \$1.50. This mine is principally owned by Bradstreet. Curtis & Co. of New York city, and the increase in the prospects and value is due no doubt to the able management of the present manager. A. th. Bradstreet, who has had charge for some months. They are now expending about \$15.000 on the project, and twenty new stamps are being added to the twenty already in place and six Frue Vanner concentrations. Mr. Bradstreet says that it is the intention of the company to increase the mili to a hundred-stamp one before Jan. 1. The power for this immense plant will be obtained by running a pipe line for two and one-half miles into Caya Creek, where they will be mill. This will give ample force to run the mill as well as the drills and other machinery of the mine. The estimated cost of these improvements is about \$80.000. Mr. Bradstreet says there is ore enough in sight to run the mill for ten years, and explorations made for 7.50 feet show the average width of the vein to be 250 feet. There are four shafts on the property, the deepest one being 140 feet. Tunnels have been run for over 5.000 feet, exposing the ore on three sides. The average value of the ore is about \$6. as tested by Prof. Huntington. The ore is mostly free milling. The present cost of mining and milling this ore is \$2.70 per ton, but it is expected that when the new plant and water have been put in they will reduce the cost to \$1 per ton. Development week still goes on, two-thirds of the men being kept on dead work. The pay roll of the company now amounts to

them.

Frank Schuitz came in from the Oracle this week for the purpose of having some assays made from rock which he had discovered near the Mammoth in the district by that name. The average assays as made of our local metallurgists reached from \$40 to \$45 per ton in gold. These discoveries were made north of the Christmas and Oracle mines, about 300 feet lower than these mines. All the indications to the north of these mines show up well with gold and improve as development progresses.

MINING IN COLORADO.

DENVER, July 2.—Theishipments of ore from DENVER, July 2.—The shipments of ore from the Aspen mines for the past week did not vary much in amount from the week before, the record being 2,970 tons. The J. C. Johnson has opened a new ore body near the main incline, which promises to be a valuable discovery. The Bushwacker mine continues to make regular shipments of 30 tons per day. The Little Rule is producing more ore than it can get transportation for. The last lot sampled 62 ounces per ton. The mine is now showing a face of four feet of mineral that will average 60 ounces or higher.

The greatest strike for several years past in Pitkin was made on Monday in the Silent Friend mine. In the incline at the 300-foot level they came into about six feet of hard carbenate, assaying 107 ounces in silver and 64 per cent, lead.

The Ute and Ulay mines, at Lake City, are now turning out nearly 100 tons per day.

A nice body of ore was uncovered last week in the Carbonate, at Alma, that will assay 400 ounces.

onness.

Frospectors are busy exploring the country over toward Georgetown. Some good finds are already reported.

The lows, at Silverton, has begun making shipments. The ore body is continuous for over 200 feet and carries a width of 2% feet.

The sunnyside, near Ouray, is turning out forty tons of quartz per day. This season's forty tons of quartz per day. forty tons of quartz per day. This season's production, it is estimated, will reach 100,000

production, it is estimated, will reach 100,000 tons.

Mines in and around Leadville continue to give prominence to the carbonate camp. About 140 tons of ore are being milled daily at the A. Y. and Minnle mines, while the mill is handling 2000 tons per day. An output of sixty tons daily is credited to the Matchless. The first body of iron ever encountered in the shaft of the American property was unearthed this week.

COPPER PROSPECTS IN CONNECTICUT.

COPPER PROSPECTS IN CONNECTICUT.

BRISTOL, Conn., July 5.—A promising vein of ore has just been struck in the copper mines of the Bristol Copper and Silver Mining Company, on the sixty-foot level. The miners are now at work upon the face of a vein of copper rock at this point which is over twenty feel in width. The prospects for the mine were never so encouraging as now, since the reopening of the old mines.

These mines were extensively worked thirty-five years ago. A shaft was put down 230

These mines were extensively worked thirty-five years ago. A shaft was put down 230 feet and the ground was honeycombed with drifts over a large area. Ore was found abundant and the mine yielded a profit of \$2,000 a month with the crude appliances then employed. Two sets of hands were employed. The rock which contained the ore was simply pulverized under heavy crushers and then washed.

washed.

The collapse and losses which finally came
The collapse and losses which finally came were caused by mismanagement and not from any fault in the mines. The manager's crown-ing impulse seems to have been to spend the largest amount of money in the shortest space of time. of time.

The new company has a capital of \$500,000,
The most improved machinery is now being employed, and the best results are being obtained.

Drowned While Trying to Save a Child. WILKESBARRE, July 6 .- John Moody, colored, was drowned in the Susquehanna this afternoon while trying to save a child who had fallen into the water. Moody had taken two white children belonging to a neighbor for a walk along the river bank. A short distance above the Kingston bridge he placed the little ones in a boat, which he moored to the shore by a long chain, and began swinging the boat around chain, and La Leona, which are worked by Libares Land and Mining Commany, of the A. W. Gifford of this city is President, the San Jee Mining Commany, of which the San Jee Mining Commany, of which San Jee Mining Commany, of which Simith is the superintendent.
